

# Excel Assignment 5

## 1. What is a ribbon in Excel?

Excel ribbon is **the row of tabs and icons at the top of the Excel window that allows you to find, understand and use commands for completing a certain task.**

## 2. What is the order of operations used for evaluating formulas in excel?

When evaluating a formula, Excel follows a standard math protocol called "order of operations". In general, Excel's order of operation follows the acronym PEMDAS (**P**arentheses, **E**xponents, **M**ultiplication, **D**ivision, **A**ddition, **S**ubtraction) but with some customization to handle the formula syntax in a spreadsheet

## 3. Reverse the string in the excel column and check whether the string is palindrome or not in the next column for each value.

Word	Reverse Word	Is Palindrome
EYE	EYE	TRUE
EAR	RAE	FALSE

yes the result are correct ad checked using mid , sequence and len formulas

## 4. Is it possible to protect value from being copied from the cell? If yes, then how to implement it.

Yes, it is possible. In order to protect your worksheet from getting copied, you need to **go into Menu bar >Review > Protect sheet > Password.** By entering password, you can secure your worksheet from getting copied by others.

## 5. What is the use of Name Box in MS-Excel?

Microsoft Excel, the Name Box **displays the cell that is currently selected in the spreadsheet.** It is located to the left of the formula bar. If a name is defined for a cell that is selected, the Name Box displays the name of the cell. You can use the Name Box to define a name for a selected cell, as wel
